

ANDREA MININ

SOLUTION ARCHITECT | SENIOR BACKEND ENGINEER | AUDIT-GRADE SYSTEMS

Buenos Aires, Argentina · Remote, full overlap with US business hours

andminin.biz@gmail.com · linkedin.com/in/andre-minin · github.com/andminin-engineering

PROFESSIONAL SUMMARY

Solution Architect and Senior Backend Engineer, working exclusively in software development since 2015 — including nearly seven years as an independent developer running projects end to end with my own clients: scope, roadmap, delivery and support — with earlier experience as an analyst programmer and data analyst between 2003 and 2012.

My work centres on systems whose correctness has to be provable to an external auditor: a certified RNG engine presented in regulatory audits, forensic evidence tooling for the courts, and production migrations that cannot break a live service. Alongside that I lead platform modernization — cloud migration, delivery automation and quality governance for high-volume transactional systems — and specialize in identity and access management with OAuth 2.0, OIDC and Keycloak.

SELECTED ACHIEVEMENTS

Certified RNG engine for a televised public lottery draw | Technical Lead

- Designed and built the random number generation engine behind the “Cupones No Ganadores” draw for the Lotería Correntina, the Corrientes provincial lottery — a televised draw supervised by a notary who certifies its legality. The engine is certified and was one of the services presented in audits by ALEA (Argentina's state lottery association) and against the WLA Security Control Standard (WLA-SCS:2016), which is built on ISO/IEC 27001 and requires independent testing and verification of the RNG before an electronic draw can be deployed.
- Led the team and the technical design of the full product: coupon extraction, the interactive on-air draw machine, the annual draw calendar and administration panel with role-based access control, and public publication of draws and winners at no-ganadores.lotemovil.com.ar.

Regulatory audit engineering

- Prepared the services, black-box test suites and reports submitted to ALEA and WLA-SCS audits, working to the security team's requirements across the provincial online betting deployments — among them La Neuquina Online, La Correntina Online, La Rionegrina Online and La Jujeñita Online.

Platform modernization over four years — deploys from hours to minutes

- Migrated 5+ production applications off manually deployed nginx servers onto AWS with continuous deployment on GitHub Actions. Releases had taken 15–30 minutes at best and several hours when fixes or rollbacks were involved; they now resolve in minutes, with automated test execution and telemetry gates wired into the pipeline as a promotion condition.
- This was the last stage of an evolution I drove from 2022: first from two environments — functional testing and production — to branch-differentiated environments, transferring deployment capability to the development teams so they could serve themselves on dev and QA; then to fully automated delivery.

Production database migration without breaking user onboarding

- Mitigated the Nosis database migrations for La Neuquina Online directly in production — handling version changes and resolving latent conflicts — so that user registrations kept working compatibly with the external Nosis identity and credit-data services.

PROFESSIONAL EXPERIENCE

Tecno Acción S.A.

Mar 2021 – May 2026 · 5 years 3 months · Buenos Aires, Argentina · Hybrid

Provincial lottery, online gaming and digital payment platforms. Four successive positions.

Software Delivery Lead — Quality & Implementations

Jul 2025 – May 2026

- Owned solution delivery and architectural guidance on critical projects across the ecosystem.
- Drove the cloud migration and CI/CD automation described in Selected Achievements.
- Defined acceptance criteria, ran architectural review and managed release risk into production environments.
- Coordinated Development, QA, Infrastructure, Support and Business toward stable releases.

Software Development Coordinator

Jun 2024 – Jul 2025

- Coordinated end-to-end requirements and evolutionary maintenance across the gaming software ecosystem.
- Managed internal teams and external vendors for technical execution, functional prioritization and deadlines.
- Led continuous improvement, process standardization and software lifecycle optimization.

Front-End Technical Reference

Apr 2022 – Aug 2024 · 2 years 5 months

- Defined front-end standards and reviewed the team's code.
- Supported engineers on complex tasks and ran mentoring and training for the front-end team.
- Drove the move from two environments — a single functional testing environment plus production — to branch-differentiated environments, so the teams could work in an orderly way across dev, QA and above.
- Learned deployment from the infrastructure team and transferred it to development: shell scripting and deploying to nginx, Tomcat and AWS, so developers could deploy to the lower environments themselves. I kept deploying across all environments, production included.

Senior Software Developer

Mar 2021 – Aug 2024 · 3 years 6 months

- Contributed directly to the refactoring of the product awarded the Martín Fierro Digital for Best Online Services Platform (2021), improving performance and system resilience.
- Built end-to-end features for the digitalization of games, and critical internal accounting modules covering revenue flows and stakeholder reporting.
- Technical reference for the revenue area, translating complex business requirements into implementation.
- Backend in Java/Spring Boot and Node.js/NestJS; front ends in React and Next.js for the draw, gaming and billing systems, including Lotemóvil, the agency and sub-agency interface. PostgreSQL, Oracle and MongoDB. Kafka on the lottery-agency accounting platform, and RabbitMQ with Redis on the online betting platform.
- Mentored trainees and junior engineers.

Freelance Software Developer

Jan 2015 – Sep 2021 · 6 years 9 months · Remote

- Delivered end-to-end web applications and internal tools for small businesses and independent professionals, working directly with each client.
- Owned the full client relationship: functional analysis, scope definition, roadmap and deliverables.
- Designed, refactored and maintained legacy systems, keeping them operational while improving performance.
- Integrated third-party APIs and automated key processes, cutting manual workload.
- Established version control, testing and documentation practices, with evolutionary support focused on scalability and stability.

Earlier experience

2003 – 2012

- Winery — Data analysis and internal systems development (2010–2012). Data cleansing for administrative and commercial processes, internal modules, and report automation.
- Grupo Arcor — Analyst Programmer and data management (2003–2008). Internal operational and accounting systems, plant process automation, stock control and logistics flows, and reporting for decision support.

INDEPENDENT PROJECTS

Peritia Lab — Forensic Video Analysis Assistant

Technical lead and architect | 2026 – present

- Supervised forensic video-analysis platform for judicial evidence, currently in field testing with a group of forensic experts.
- Human-in-the-loop by design: the expert reviews, adjusts and validates; the tool assists and produces reproducible, auditable evidence.
- Forensic-grade requirements: SHA-256 integrity, reproducible run manifests, per-event capture and audit logging, and mandatory uncertainty reporting.
- Python, computer vision pipeline, packaged as an offline portable application.

open-job-hunter — MCP server with local AI evaluation

Author | 2026 – present | MIT licence

- MCP (Model Context Protocol) server that discovers job openings across several sources and evaluates them against a profile, returning a score, detected risks and a positioning angle.
- Runs entirely on a local model with Ollama — the user's data never leaves their machine.
- TypeScript, layered architecture, Zod validation, Docker and CI on GitHub Actions. Published open source.

Tarifa Justa — Electricity tariff transparency

- Tool that lets a household verify its electricity bill to the cent against the tariff schedule of its distributor. Ingestion and normalization of tariff schedules, and verifiable calculation.

TECHNICAL SKILLS

Core Java, Spring Boot, Node.js, NestJS, TypeScript, React, Next.js, Python

Cloud & Infra AWS (ECS, Lambda, S3, RDS, API Gateway, CloudWatch), Kubernetes, Docker, Terraform, nginx, Tomcat, Linux, Bash

CI/CD & Delivery GitHub Actions, GitLab CI/CD, Git, release management

Identity & Access OAuth 2.0, OIDC, Keycloak, Spring Security, JWT, Firebase Auth, Supabase Auth

Data & Messaging PostgreSQL, Oracle, MongoDB, SQL, Kafka, RabbitMQ, Redis

Testing & Quality Jest, JUnit, Testing Library, OWASP, SonarQube, black-box test design, code review

Architecture Microservices, event-driven systems, Clean Architecture, DDD, REST API design

CMS & portals WordPress, Shopify

Ways of working Agile / Scrum, Jira, SDLC, technical mentoring, regulatory audit preparation (ALEA, WLA-SCS / ISO 27001)

EDUCATION

Diploma in Blockchain and Digital Finance — Universidad Tecnológica Nacional (UTN FRBA), 2024

Higher Technical Degree in Application Programming — Universidad Tecnológica Nacional (UTN). Not completed.

Continuous professional development: 25+ programs in Java & Spring Boot, Software Architecture, AWS & Cloud Computing, DevOps & CI/CD, Project Management (PMBOK) and Technical Leadership.

LANGUAGES

Spanish — Native

English — Intermediate (B1). Advanced technical reading and writing; daily written collaboration; currently in daily conversational practice.
